DETAILED ACTION

Claim Objections

1. Applicant is advised that should claims 4 - 5 and 22 - 23 be found allowable, claims 5 and 23 will be objected to under 37 CFR 1.75 as being a substantial duplicate of claims 4 and 22 respectively. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 112

- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.
- 3. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 4. Claim 10 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: Exhaust and intake ports are located on the opposite sides of the claimed cooling system and it is not possible for them to face each other.

Art Unit: 2835

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1-3, 6-10, 12, 14, 18, 20-21, 24-25, 32, 34-39 are rejected under 35 U.S.C. 102(b) as being anticipated by Sonobe et al.

Sonobe et al teach a cooling system, Figs. 1-16, comprising: a plenum 100 formed of a thermally conductive material and having a base 100a including a plurality of passageways 105 adapted to pass air therethrough, the passageways 105 being defined by a plurality of collinear fins 100g extending in a plurality of rows outwardly from an upper surface of the base 100a; the plenum further comprising at least one receptacle 114 outwardly extending from a bottom surface of the base 100a in the opposite direction than fins 100g; and a heat generating electrical component 130 received in the receptacle 114, wherein heat generated by the component 130 is transferred by the receptacle 114 to fins 100g. Sonobe et al teach furthermore: said cooling system further comprising: fans 103 creating air flow from intake opposite fans 130 to exhaust opening of the fans; a lid member 101 coupled to the plenum to define the passageways 105, wherein fins 100g separate one passageway from another passageway. Regarding to the claims 37-39: Sonobe et al teach all the limitations of the claims except said heat generating component is a resistor (claim 37); a transistor

Art Unit: 2835

(claim 38) or an integrated circuit (claim 39). However, Sonobe et al teach the heat generating component 130 as being an amplifying module, which inherently comprises such electronic components.

Allowable Subject Matter

- 7. Claims 11, 13, 15-17, 19, 26-31, 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 8. Claims 4-5 and 22-23 would be allowable if rewritten to overcome objections, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 9. The following is a statement of reasons for the indication of allowable subject matter: Said base comprises a pair of electrically conductive portions separated from each other (claims 4-5 and 22-23); The exhaust port opens laterally from the base (claim 11); The base further comprises a plurality of openings extending thererthrough and communicating with the passageways, the opening adapted to generate a venture effect, when air is flowing through the passageways (claims 13, 19, 26-31); The plenum receptacle is adapted to receive the heat generating component in a friction fit arrangement (claims 15-17, 33).
- 10. The prior art made of record in the PTO Form 892 and not relied upon is considered pertinent to applicant's disclosure.
